

**Increase your profits by installing
the most cost effective Document
Management Solution for Digital
Copiers in the Industry!**

Introducing the Scan & View II Document Imaging Appliance for Digital Copiers

Market the most affordable and productive Document Management Solution available today for Digital Copier Input--the Scan & View II Document Imaging Appliance

Scan & View II

The Scan & View II Document Imaging Appliance is much more than just Document Capture like most products, it includes **Document Scanning, Document Indexing, Document Storage, and Document Retrievals!**

Scan & View II Features:

Virtual Scan Document Capture

Optimised for Digital Copiers featuring extremely easy set up and built-in Bar Code Indexing and Job Control Sheets, simply Scan Images to the Scan & View II Virtual Folders for Automated Processing.

Scan & View II Imaging Appliance

Self-contained Document Imaging System that is extremely easy to install and Setup for your clients requiring very little Technical Support. Scan & View II Virtual Folders automatically processes Images created by Digital Copiers and provides Document Retrievals via Internet or Intranet.

The Scan & View II Document Imaging Appliance provides the most value of any comparable product in the Document Imaging Industry and will quickly turn lost opportunities into more Sales and Profits!

Eye Communication Systems, Inc. 455 E. Industrial Dr. P.O. Box 620 Harland, WI 53029

Scan & View II Document Imaging Appliance Specifications & Feature List

- * System Design and Architecture based upon XML, .NET, and SOAP technology
- * Windows 2000 Server and 2000 SQL Single Processor License
- * Pentium IV 2.8 GHZ Processor/2.0GB RAM/2x200 GB Hard Drives
- * Intelligent Mirror automated Image and SQL database backup
- * **10 concurrent users Server Document Management Software**
- * **Web based Document Retrievals without requiring any other modules for Internet or Network retrievals**
- * Viewing images as Thumbnails for high speed browsing of many images
- * Document Viewer supports Highlighting, Redaction, Notes, Document Hyper-linking to other Programs (Word, Excel, etc.)
- * **TOOLS provides high speed scanners with Batch Scanning and manual or Bar Code Indexing**
- * Easily supports remote location scanning/indexing (either from scanners or digital copiers)
- * **Automated Scanning/Indexing with built-in Bar Code Reading (slowest process in Document Imaging is indexing)**
- * **VirtualScan captures images automatically from Digital Copier (MFD) and creates Batches within Server**
- * **VirtualScan will automatically Index and Store documents for immediate Retrievals when using Bar Codes Sheets**
- * VirtualScan creates Virtual Folder for automatically managing images from any source
- * **Electronic Document Printing and capture of WORD, Excel, or any printed Document**
- * **Enable interface to Image Enable existing Software Applications**
- * Extremely fast retrievals and displays by utilizing XML Metadata
- * Server Project Generator extremely easy to use in creating new Applications and associated Index Fields
- * Unlimited Projects (Applications) with up to 20 Index Fields per Project
- * Assign Users via User Setup with associated User Privileges
- * Project Setup automatically creates Virtual Folder that is assigned to Application for VirtualScan - MFD Scanning
- * Server supports high scanning volumes for fast throughput (especially with Bar Code Indexing)
- * Scan & View II is scalable and can easily be expanded with additional clients and storage capacity
- * Canon DR2080C scanner (optional)
- * Supports most ISIS based scanners or digital copiers without having to upgrade system
- * **Best Pricing Point of any comparable System in the Industry!**

“Affordable Document Imaging Technology”

Software Modules

Server

Web based Document Imaging Software with the following functionality:
Project Setup to create unlimited Applications with up to 20 Index Fields
User Setup to create and assign permission to Users
Query and View Documents from Web Browser Interface
10 Concurrent client connections
SQL Data Base (MSDE) and XML based
Admin MS DE database administrator
System manages approximately 3 million images - backed up internally

BatchScan

Batch Scanning Interface supports most ISIS scanners with the following functionality:
Document Import
Index Import
Bar Code Job Control Sheets to automatically create New Folders
3 of 9 Bar Code Indexing (Single Bar Code only, may link with other Imported Index Fields)
Printing Function to create Bar Code Job Control Sheets
Project Selector based upon Login
Ability to Scan and Index without being connected to Server
Folder and Page navigation based upon Bar Code Job Sheet

VirtualScan

Industry's easiest Document Capture from Digital Copiers with following functionality:
Automatic Virtual Folder created and assigned to Projects
Processes documents based upon Bar Code Job Sheets
Automatically indexes documents when utilizing Bar Code Index Sheets
Works with any Digital Copier that utilizes TIFs and can scan to a designated Folder

Tools

Batch scanning interface supports most ISIS scanners with following functionality:
Bar Code Job Control Sheets to automatically create New Folders
Bar Code Indexing of Documents (3 of 9) and will support up to 20 Bar Code Indexes per Document
Scan Quality Control with ability to Append, Replace and Rescan Images
Integrated Indexing either Manually or by Bar Codes
Thumbnail and Full Page Viewing while Scanning
Integrated Scanning/Viewing from Scan & View II
Ability to Scan and Index without being connected to Scan & View II
Document Capture via the Web
Tele Form Forms Processing Software Image/Index Import Function

Also Includes the following Optional Modules:

Electronic Print Driver

To convert Electronic Documents (Word, Excel, Print Streams, etc.) to TIF Images
Automatically launches Tools to Create New Folder or add documents to existing Folder

Enable

Linking Interface to Image Enable existing Software Applications
Extremely easy to Setup and Configure with Host Applications, Office Documents, Server Software, etc.

Retrieve documents in Scan & View II from queries in Host Application

Optional Module Not Included

Portfolio CD-ROM Publishing
Create searchable and viewable CD ROM Disks
Distribute and Index Records along with associated images in Scan & View II
Database to CD ROM
